---

## RELEVANT PROJECTS

### Online Bank Management System

April 2022- June 2022

Built an online banking management system using HTML, CSS ,Javascript and PHP. In this mini web application a user can be able to send money and receive money from other users and admin can add money to a specified users account when the user deposits cash at the front desk.

### Hospital Management System with Heart disease Prediction

April 2023 - July 2023

I successfully built a Hospital management system with heart disease prediction using PHP and Python for my final year project. This system allows a user to be able to book appointments and cancel appointments if necessary and for the doctor to be able to know the appointments that they have and when it is scheduled. It also allows doctors to know if a patient is at risk of heart disease when the right values are put into the system.
